

Getting Started With AASHTOWare Project Data Analytics™

AASHTOWare Project Data Analytics is a trusted software-as-a-service (SaaS) solution for analyzing all aspects of the construction lifecycle, including enhanced functionality based on the original BAMS/DSS™ analysis software.

Agencies use this product to set and analyze key performance indicators, review executive-level dashboards, identify issues that require attention, and respond to information requests with accurate, current data.

Helping Agencies Get Started

Get your data
ready for analysis

Assist you in
performing a basic
data health check

Guide the setup
of your agency's
parameters

Establish user
permissions,
data admin

Lead workshop tailored to your agency on
Data Analytics literacy and best practices

Service Provider Background

Established in 1977, Infotech has been a prominent provider of software and services within the infrastructure industry. Originally pioneering the development of AASHTOWare Project BAMS/DSS™, which was later acquired by AASHTO in the 1980s, Infotech leverages decades of industry expertise, making them valuable as the main contractor for providing always dependable support for AASHTOWare Project service needs.

Results and Benefits

- + Configure Data Analytics SaaS to meet your agency's business practices
- + Gain hands-on experience using the module and enable your team to create value immediately
- + Understand different areas/types of analysis
- + Complete a basic data health check
