AASHTOWare Project Data Analytics™ Coordinate Validation Service

As one of several data health-oriented services, the Coordinate Validation service helps agencies get a step closer to having accurate, quality data for analysis and reporting by validating existing coordinates, identifying gaps, and providing recommendations.

Agency Outcomes

Understanding the locations involved with bidding activities has a significant impact on an agency's understanding of bid prices, vendor market bidding behavior, capacity, availability, and competition. Ensuring the validity of existing coordinates is one of the crucial first steps towards successful data analysis. Agencies who use this service will leave with total confidence in the data that will be used for analysis and recommendations for moving forward.

Our Process

Our Coordinate Validation Service follows a simple, three step process:

1 Evaluate the validity of existing coordinates

2 Identify gaps and analyze discrepancies

3 Provide agency with recommendations and remedies

Deliverables

A set of valid coordinates for import into AASHTOWare Project database

A health check report that covers:

+ **Current state of coordinate validity**
+ **A summary of cleanup efforts**
+ **Recommendations for moving forward**

Format

+ Kickoff call to discuss objectives
+ Report review call
+ Email correspondence for report delivery

As your partner in analysis, Infotech is here to answer any questions you may have about workshops or the AASHTOWare Project Data Analytics SaaS module.
